

## New Feature: Round Robins

2014-08-11 - Ben Henley - [Comments \(0\)](#) - [Product](#)

When you're managing a busy helpdesk, sharing out the workload evenly can be vital.

We've added support for 'round robin' assignment to DeskPRO's powerful automation system. Here's how it works: you define a queue of agents, and as tickets come in, each one is assigned to the next agent in the queue, until the end is reached and the round robin begins again with the first agent.

Because you're assigning to individual agents, it's always clear who's responsible for each ticket; and because it's automatic, there's no time spent deciding who'll handle which issue.

The screenshot shows a configuration form for Round Robins. It has a 'Title \*' field with the value 'Support triage' and a note: 'This is the title as it will appear throughout the agent and user interfaces.' Below this is an 'Agents \*' section with a list of agents: Gideon Beard (checked, 'Next in queue'), Lucy Hamlet (checked), Hisco Romnus (checked), Nadim Singh (checked), Chris Max (checked), Lesley Burrow (checked), and Sue Kalam (unchecked). Each agent name is preceded by a hamburger menu icon.

Setting up a round robin is fast and easy because you can bulk add agents.

The screenshot shows the 'Bulk add agents that are members of teams, departments or permission groups' section. It features a search input field with a magnifying glass icon, an 'Add' button, and a dropdown menu. The dropdown menu is open, showing a list of departments: Sales, Support (highlighted with a mouse cursor), Partnerships, and Media Requests. There is also a 'Save' button visible.

You assign tickets to round robins using actions within the existing DeskPRO system of triggers, escalations and SLAs.

If you only want to assign *some* tickets to the round robin, or you want to have multiple different queues, it's all configurable using straightforward but incredibly flexible business logic.
