

Stay up to date with all of Deskpro's recent changes

2022-08-30 - Lara Proud - Comments (0) - Product (Agent)

In addition to our Latest Updates pop up, we are announcing our brand new **Recent Changes** App! You can find a complete list of all the newest features that have been released via the App in the Agent interface

The screenshot shows the Deskpro Agent interface with a 'Latest News' app open. The app displays the following content:

Quicker access to tickets
July 25, 2022

Ticket Queues, Lists, Searches, Problems, My Stars, and Labels are now in the form of accordions. You can expand and collapse them easily.

Report on user waiting time and first reply time within working hours
July 20, 2022

Before now, our reporting system had the ability to measure waiting times, however, this counted the total time and did not take into account working hours set in your helpdesk. We're extremely pleased to announce that we have added the ability to track waiting times within working hours.

Waiting times available for reporting before:

- tickets.total_user_waiting
- tickets.total_to_first_reply

These count the total time, in seconds, a user is waiting.

We have added two more times to represent waiting times within working hours:

- tickets.total_user_waiting_wh
- tickets.total_to_first_reply

Before now, our reporting system had the ability to measure waiting times, however, this counted the total time and did not take into account working hours set in your helpdesk. We're extremely pleased to announce that we have added the ability to track waiting times within working hours.

Access the app by clicking on the  icon in the top right-hand corner of the interface (next to Agent IM). From the app, you will see a continuous feed of all the latest changes and features that are available on your helpdesk.

You can scroll through the list in the app and see all the new functionality we have added to Deskpro, or you can view the updates in the Help Center by clicking on the redirect arrow icon in the top corner.
