A selection from a field to display another field Finished

• Lu Parente

• Forum name: #Feature Request

We are looking for the ability to select an option from a custom field which would drive the next field displayed in a form. Currently, the only fields that are supported are the built in fields of Category, Product and Priority. Can you please develop the ability to do this with any custom field. $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> An option from a custom multi-select field is selected and once selected a subsequent custom field is displayed. $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> $\$ /> Lu.
