

(Add option to) Display "Last updated" instead of "Created" date for KB articles Report

- Koen Glotzbach
- **Forum name:** #Feature Request

Currently, Knowledgebase (KB) articles have a column on the right side that displays information about the article: Author and Date Created.

In most cases, the Date Created is not super relevant, because the article has been edited many times since. Instead, the Last Updated date should be displayed. From this a user can understand how up to date the information might be.
