Changing the Colour of Stat Background Collecting Feedback

- Christian
- **Forum name:** #Feature Request

We would like to be able to update the colour on 'simple stat' widgets.
Currently you can update charts (Pie charts, bar charts etc) using JSON but it isn't possible to update the stat.

You can update properties of charts on dashboards using json. However this doesn't work for simple stats (or table data). It could be helpful if these display types supported this functionality as well.
