error upgrading from build 75 Finished

- Christopher Callaham
- **Forum name:** #Feature Request

C:\Program Files (x86)\PHP\v5.3_wincache>php.exe C:\inetpub\wwwroot\betadesk\upg

 rade.php

 Error: We could not verify the path to your PHP binary

 You have configured DeskPRO to use the PHP binary at "C:\Program Files

 (x86)\PHP\v5.3_wincache\php-win.exe" but it does not meet server

 requirements.

 Since you are running this command fine, that means you have a PHP

 binary that is suitable but you need to edit config.php and to correct

 the `php_path` value.

 Errors detected: dom_ext

This is from a mistake earlier today. Unfortunately the only way to enable the automatic upgrader again is to overwrite app/src/Application/InstallBundle/Install/server_check_functions.php with this patched file: http://support.deskpro.com/file.php/6GWKKAQRGMX5273A4CFBF/server_check_functions.php.zip
