

Possible Installation Issue with PHP 5.4.4 Archived

- Christopher Callaham
- **Forum name:** #Bug Report

In windws IIS 7.5 I tried installing a copy of deskpro v4 on a site running PHP 5.4.4 with APC enabled. It went as far as installing the first 10 tables and then started SKIPPING every other table install. When I looked in the database the tables it was skipping were actually there I am not sure as to why it didn't continue the install.

 Windows 2008 R2
 IIS 7.5
 PHP 5.4.4

Ok disabling the APC extension in the php.ini allowed it to install on PHP 5.4.4

Ok, thanks. I presume this is the latest version of APC. Can you try again with APC installed to confirm it definitely is APC that caused the problem?

Did you have any luck trying again with APC installed?

Christopher Callaham

Sorry Chris haven't had a chance to try it again yet. I'm going to try to get it done today.

Presume this issue was never replicated? If not, I'll close this bug; it's not something we can replicate.
