I'm having trouble being locked out of my helpdesk by IP whitelisting

Ben Henley - 2023-10-03 - Comments (0) - Deskpro Legacy

Question:

I enabled IP whitelisting on my helpdesk. Something has gone wrong with sending outgoing email, so I can't receive the email to verify my IP address. How can I log in?

Answer:

In Deskpro On-Premise, you can disable IP whitelisting from the command line.

Go to the folder where you installed Deskpro. Edit config.php and add this line at the bottom:

```
$DP_CONFIG['SETTINGS'] = array('agent.ip_security.enabled' => false);
```

That will disable the IP whitelisting check. Once you have fixed the problem with email, don't forget to delete or comment out the line.
