

Why is my custom stat just showing query field names?

Benedict Sycamore - 2018-05-14 - Comments (0) - Creating Reports

Question:

I've written a custom report in DPQL. When I run it, it just returns the names of the fields I want, not the actual results. What's going on?

Results

Status	Org
tickets.status	tickets.organization
tickets.status	tickets.organization
tickets.status	tickets.organization
tickets.status	tickets.organization
tickets.status	tickets.organization
tickets.status	tickets.organization
tickets.status	tickets.organization
tickets.status	tickets.organization

Answer:

This error is often caused by putting the variable names in quote marks. You don't need to put variables in quotes when writing DPQL.
