Disable Commenting on Help Center Content

Security Test - 2023-08-17 - [Comentarios \(0\)](#) - [Help Center](#)

If you want to stop users from being able to leave comments on your Help Center Content, including Guide Pages, Knowledgebase Articles, News Posts, Community Topics, and Files, you can disable the feature using Usergroup Permissions.

Go to **Admin > CRM > Usergroups**. To disable commenting you will need to update the Permissions for the two built-in Permission Groups.

First, go to the **Everyone** Usergroup, from here select the **Permissions** tab, and **Help Center** then for the specific items you want to disable the commenting for, toggle off the permission for **Submit comments on X** and **hit Save**.

Publish Permissions 	Toggle All
Can use Knowledgebase	<input checked="" type="checkbox"/>
Can rate articles	<input checked="" type="checkbox"/>
Submit comments on articles	<input type="checkbox"/>
New comments are visible immediately (do not require agent review)	<input type="checkbox"/>
Can share articles	<input type="checkbox"/>

You will then need to repeat the same steps for the **Registered** Usergroup.

Once you have completed this, the Help Center items you have disabled commenting on will no longer offer the option to comment for any Registered or Guest users.

Note

These instructions will disable the ability to comment on Help Center content provided you do not have additional Custom Usergroups that offer this feature to specific users.
