

I'm having trouble getting embedded videos to work correctly

Ben Henley - 2023-08-16 - Comentarios (0) - Using Deskpro

Question:

My agents used to be able to embed videos in Knowledgebase articles. Now, when they try to embed a video, it looks fine when the article is being edited, but when the article is saved, it just displays the text of the video embed code. Why is this happening?

Answer:

To embed potentially harmful code in an article (including iframes and Javascript that are often used for embedding videos or widgets), agents need the new "Can insert any HTML (including potentially dangerous HTML)" permission.

Check that agents who should be able to embed videos have this permission enabled in **Admin > Agents > Agents > Permissions > Publish**.

If not, you can either enable it for each agent, or add it to a permission group.

The screenshot shows the 'Permissions' tab in the Deskpro Admin interface. At the top, there are tabs for 'Properties', 'Permissions', 'Departments', 'Ticket Notifications', and 'Other Notifications'. Below these tabs, there is a blue box with the text: 'Permission groups are pre-defined sets of permissions you can easily apply to multiple agents. Select the permission groups to apply to this agent:'. There are four checkboxes: 'All Permissions' (checked), 'All Non-Destructive Permissions', 'Interns', and 'Sales'. Below this, there are several permission categories: 'Tickets', 'People', 'Chat', 'Publish', 'Profile', and 'Tasks'. The 'Publish' category is expanded, showing a list of permissions. The 'Can insert any HTML (including potentially dangerous HTML)' permission is highlighted, and its toggle switch is turned on. Other permissions in the list include 'Can create content', 'Can delete content', and 'Can edit content', all of which have their toggle switches turned on.
