Introducing Auto-Threading for Emails

2024-07-26 - Alberto - [Comentarios \(0\)](#) - [Product \(Admin\)](#)

Auto-Thread: A New Capability in Deskpro's Inbound Email Settings. Designed to enhance email management in Deskpro, Auto-Threading offers Admins increased control and efficiency when handling incoming emails.

The screenshot displays the 'Auto-thread emails from same user' configuration page in the Deskpro Admin interface. At the top, there is a toggle switch that is currently turned on. Below the toggle, a descriptive text explains that when a user sends multiple emails to the same helpdesk account within a set time frame, Deskpro will automatically thread them into a single ticket. This is followed by a 'Thread emails sent within' section with a text input field containing '48' and a dropdown menu set to 'hours'. A checkbox labeled 'Only thread if emails are sent to the same email account' is currently unchecked. The 'Handling Participants' section features a dropdown menu set to 'Require email and ticket participants to match exactly'. Below this, a note states that for an email to be matched to a ticket, all participants must match. The 'Include Auto-Thread on Inactive Tickets' section allows users to select which inactive ticket statuses (Resolved, Deleted, Spam) should be included in auto-threading, with all three options currently unchecked.

☒ **Auto-thread emails from same user**

When a user submits more than one email to the same helpdesk email account within a specified time, Deskpro will thread all of the messages into one ticket.

Thread emails sent within

☐ Only thread if emails are sent to the same email account [?](#)

Handling Participants

For an email to be matched to a ticket, all the participants on the ticket have to match the email exactly.

Include Auto-Thread on Inactive Tickets

Choose which inactive ticket statuses you want Auto-Thread to run on. For the options enabled, Deskpro will thread the messages into one ticket. By default, Auto-Thread always runs on Awaiting Agent, Awaiting User.

☐ Resolved

☐ Deleted

☐ Spam

Key Features of Auto-Thread:

- Enable/Disable Auto-Threading:** Admins can easily enable or disable the Auto-Thread feature for emails originating from the same user, providing flexible control over email organization. The timer will reset based on when the last user email was received, ensuring the relevance of the ongoing conversation.
- Define Merge Window:** Customize the merge window to "auto-thread" emails, specifying the duration in hours, days, or weeks to ensure relevant emails are threaded together.
- Prevent Threading by Participants:** Configure settings to prevent emails from threading if the participants involved do not match, maintaining clarity in email conversations.
- Prevent Threading by Email Account:** Ensure emails are not threaded if sent to different helpdesk email accounts, preserving distinct communication channels.

5. **Advanced Threading Logic:** Auto-Thread uses a sophisticated logic sequence to determine if emails should be threaded.

With Auto-Threading enabled Deskpro streamlines email management, helping teams maintain more organized email threads. For information on configuring Auto-Threading settings read the [Admin Guide](#).
