Ability to use the ticket-errors-overlay div in a custom built app Collecting Feedback

Christian Mattart •

Forum name: #Feature Request •

We have created an app which does two things in a particular scenario: hide the reply box .and display a red warning to the agent

We'd like to be able to use the ticket-errors-overlay div that is shown when a ticket has no .category instead

:We'd like it work something like this

```
;scope.show_error_overlay = true$
```

```
;"scope.error_overlay_message = "bla bla$
```
