.Allow agents to set a URL redirect on an archived article so it can point to a published article  
For example, I have 4 Knowledge Base articles which are duplicates. I only want to keep 1  
.article published and public facing

Would it be possible to create a way to archive 3 of the articles (so that they are not public  
?facing) and set up URL redirects to the 1 article I will keep published and public

This is particularly useful if a user has bookmarked a link to an article that you want to  
.archive and redirect them to a newer one without them having to find it in the search
