Custom Slack message for triggers Collecting Feedback

.Michael W •

Forum name: #Feature Request •

When using multiple update triggers that notify a slack user/channel, it would be nice, if a custom message text could be set beside the channel, so it is easier to see for the agents, .which trigger was activated

We are currently working on a V2 Apps platform which will allow for a lot more customizatons to the apps and integrations, such as improvements to add flexibility to the Slack notifications

Yes, this would be very nice, it needs at least a custom associated message. We've found most of the Deskpro included apps are one simple feature away from being useful, in almost .every case

I ended up using the "Call Web Hook (Custom JSON Payload)" for Slack. Works better than the .native app
