Customisable tab title Collecting Feedback

Simon Frost •

Forum name: #Feature Request •

We would like the ability to be able to customise the browser tab title (i.e. the html <title> .tags) with variables, to be able to display information about the active Deskpro tabs

For example, Deskpro Agent Interface | {{Ticket Subject}} - {{Ticket
{{Organization

This should change depending on whichever tab is currently selected within Deskpro, so if we .select a different tab, the <title> should update with the new information
