Fixed Ticket Title Collecting Feedback

Christoph Strauss • Forum name: #Feature Request •

I would like to have a fixed ticket title bar with ticket subject, ticket ID/reference and requester name. & amp;lt;br /& amp;gt;<br /&gt;<br />

When working on a ticket and you scroll down in the history to e.g. download attachments of a specific comment you usually want to save the attachments in a folder named with the ticket ID. This means I need to scroll all the way up and remember the ticket ID before I scroll down and find the attachment which I want to save. With a fixed ticket title I would see this .information at all time which would improve the usability
