Option to add labels or paths to the quick search results in the portal to make it clearer what product/category an article relates to Collecting Feedback

George Lewis •

Forum name: #Feature Request •

We'd like the option to add labels or paths to the quick search results displayed when completing the search box

Our customer organises content by product. This means that articles have duplicate names. So in the quick search it is not possible to distinguish between the articles

This could be resolved if we could display paths or labels
