## How do I embed individual knowledgebase articles in an ?external app or site

Ben Henley - 2023-08-16 - Comment (1) - Deskpro Apps

## :Question

We'd like to display individual knowledgebase articles embedded within an application we have created. Is there a way to get the article content without the portal header, sidebar ?.etc

## :Answer

You can use the Deskpro API to retrieve article content. Your app or site can make a REST API call and get the content of an article in HTML, which you can then display. See the .Developer Manual for <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in general and details of <a href="https://example.com/how-to-use-the-API">how to use the API</a> in a superior of the superior of the superior of the api.
