? How do I manually run the email processing command

Sangeetha Lakshminarayana - 2023-09-13 - Comment (1) - Sysadmin

Sometimes you may want to manually run incoming email processing: for .example, to debug connection problems

Email processing can be done from the command line using the below :command

```
opc inst -i helpdesk php -- dpv5/bin/cron --verbose -f --
job=process_email_gateways
```

.The --verbose flag tells Deskpro to output lots of debug output
