

## I don't want to show the author of Knowledgebase articles

Lauren Cumming - 2023-08-31 - Comment (1) - Deskpro Legacy

### :Question

How do I remove the author attribution for Knowledgebase articles on the portal? I don't want to show this information

### :Answer

You can do this by editing two templates. Go to **Admin > User Interface > Portal > Template Editor** and click on the **view.html** template under the 'Articles' heading

(Delete the following line (line #26 .1

```
span style="background: url({{ avatar_url(article.person) }}) no-repeat;
background-size: cover" class="agent-avatar agent-avatar-mini"></span> {{
{{ article.person.display_name_user
```

```
<div class="article-meta">
  <span style="background: url({{ avatar_url(article.person) }}) no-repeat; background-size: cover" class="agent-avatar agent-avatar-mini"></span>
  {{ article.person.display_name_user }}
</div>
```

Go to the template called **articlelist/design.html**

(Delete the following line (line #9 .2

```
Posted by <span style="background: url({{ avatar_url(article.person) }}) no-repeat; background-size: cover" class="agent-avatar agent-avatar-mini"></span>
{{ {{ article.person.display_name_user
```

```
<div class="article-meta">
  Posted by <span style="background: url({{ avatar_url(article.person) }}) no-repeat; background-size: cover" class="agent-avatar agent-avatar-mini"></span>
  in {{ article.date_published | date("Y-m-d") }}
</div>
```

This will remove the author name when viewing an individual article or browsing a category

If you make a mistake editing one of the templates and there's a problem displaying those pages, just select the problem template and use **Revert to default**
