

Sending SMS updates to users using Zapier and Twilio

Matthew Wray - 2024-08-21 - Comment (1) - Using Deskpro

Deskpro has Clickatell and Twilio SMS apps to allow you to send ticket update notifications to Agents

You can also leverage the third party integration app [Zapier](#) alongside these platforms to send SMS updates directly to users

In this example we're going to run through using Zapier to link Deskpro to Twilio and allow you to send out ticket replies as SMS messages

Create accounts for Zapier and Twilio (1)

:You can create accounts for both platforms on their websites

<https://zapier.com>

[/https://www.twilio.com](https://www.twilio.com)

Both these companies offer a free trial period so you can setup and test out the integration before you need to sign up to a full account of either

They are premium apps so there may be a cost associated to using them. You can check out their pricing structures on their websites as well

<https://www.twilio.com/pricing>

<https://zapier.com/app/billing/plans>

Open up Zapier and go to the 'Zap' editor (2)

Once you've signed up, log into Zapier and Hit 'Make a Zap' in the top right corner of your home page (a 'Zap' is a term Zapier use to describe each integration you create

.Once selected you will be taken to the Zap creation page

It's structured along the lines of **Trigger > Action**

In this instance, we would like an occurrence in Deskpro to instigate an action in Twilio so we will setup the Deskpro side of the integration first

Setup the Deskpro Integration (3)

(a) Choose app & event (Deskpro Event)

In this example, we're going to use a 'New ticket Reply' to instigate our SMS message but there are also options to send a message when a new ticket or person are created

The screenshot shows the Zapier configuration interface for a new Zap. At the top, it says "When this happens ..." followed by "1. New Ticket Reply in Deskpro". Below this is a section titled "Choose App & Event". Under "Choose App (required)", a dropdown menu shows "Deskpro" selected. Under "Choose Trigger Event (required)", a dropdown menu shows "New Ticket Reply" selected. A list of other events is visible below the dropdown: "New Person" (Triggers when a new person is created.), "New Ticket" (Triggers when a new ticket is created.), and "New Ticket Reply" (Triggers when a ticket is answered.).

b) Choose Account

:Choose 'Add new account' and you'll then be taken to an authentication page

The screenshot shows the Zapier authentication page titled "Allow Zapier to access your Deskpro Account?". It has two main sections: "Platform (required)" and "API Key (required)". The "Platform" section includes a text box for the full domain of the DeskPRO platform, with the example "https://yoursupport.deskpro.com /". The "API Key" section includes a text box for the API key, with the example "1:ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890". At the bottom, there are two buttons: "Yes, Continue" (orange) and "Cancel" (grey).

Specify your helpdesk URL and your api key (there's information on generating api keys [in](#)

.([our Guides](#) if needed

c) Find data

Once you've chosen your account you'll be given the option to Find Data. This step is important as it pulls sample data from your helpdesk into Zapier and defines the options .that are available when setting up the Twilio side of the integration

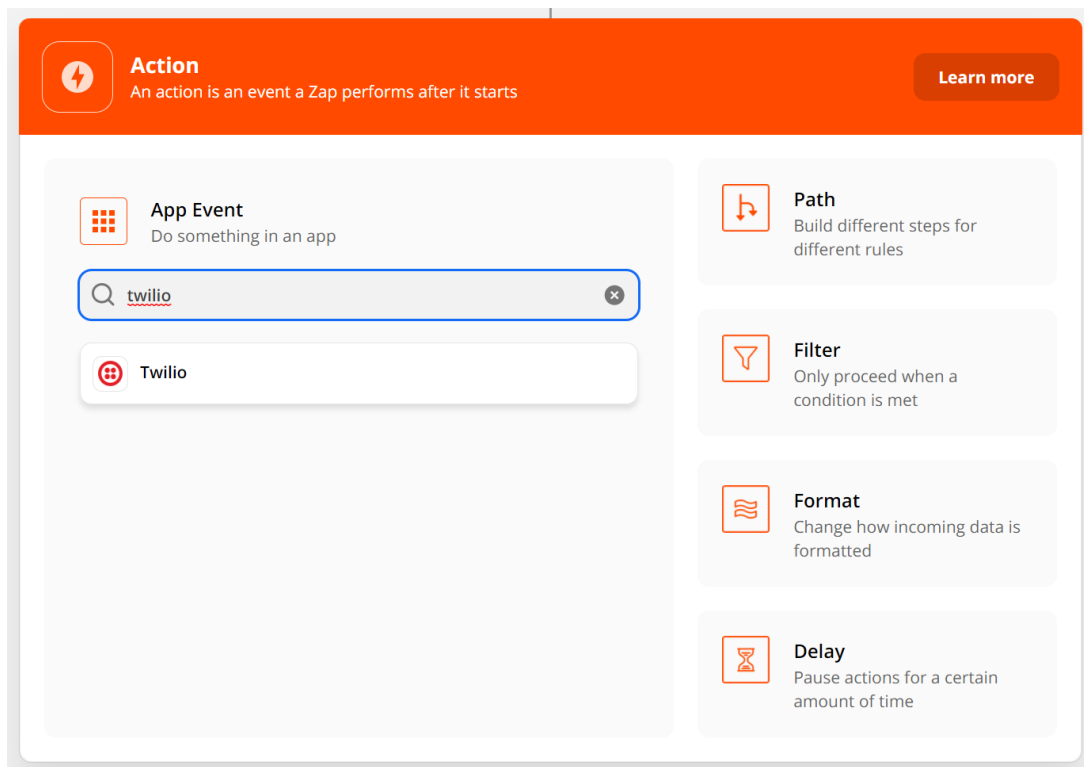

Hit Test and continue if you want to test the connection . Hit test and review if you want to take a look at the kind of data that's being pulled across or you want to Get more samples :((you can read more about samples in [Zapier's own documentation](#) if you are interested

(-: If all is well with your test you have completed the Deskpro side of the integration

Setup the Twilio Integration (3

Once the test has been completed, click on 'Continue' and you'll be taken to the :**Action** element of the integration. This is where you can select Twilio

(a) Choose app & event (Twilio Event)

Once the test has been completed, click on 'Continue' and you'll be taken to the **:Action** element of the integration. This is where you can select Twilio

b) Choose Account

.'Click on 'Sign in to Twilio

You'll then be taken to an authentication page to key in Account SID and Auth Token which can be found on your [Twilio](#) account

Allow Zapier to access your Twilio Account?

Account SID *(required)*

Log into your Twilio account and find "API Credentials" on this page
<https://www.twilio.com/user/account/settings>

Auth Token *(required)*

Found directly below your Account SID.

Yes, Continue

Cancel

c) Set up action
