Setting User Contact Data

Ashley Dawson - 2023-08-29 - Comment (1) - API

When creating users (agents or regular users) as well as organizations, you can set contact data in their profiles. For example, contact data may include their WhatsApp username, personal website URL, or address. When creating users (people) and organizations you can pass an additional "contact_data" property that allows you to attach one or more pieces of contact information.

Contact Data

Required Fields	Type	Contact Data Type
address (string) city (string) state (string) zip) (string	address	**Address**
url) (string	website	**Website**
service: (choice: whatsapp, aim, msn, icq, skype, gtalk, other) username) (string	instant_message	**(Instant Message (IM**
username (string) display_feed) (boolean	twitter	**Twitter**
url) (string	linked_in	**LinkedIn**
url) (string	facebook	**Facebook**
username) (string	apply	**Apple**
username) (string	trust_pilot	**Trust Pilot**
username (string) instagram_id) (string	instagram	**Instagram**

Example Request

Below is an example request showing all contact data objects populated. Note that these are optional, so you can just add one of these objects if you like. each property of the "contact_data" object is the "type" of the contact data object as shown in the table above.
