

Apply quick actions without even opening a ticket

(Lara Proud - Comment (1) - Product (Agent) - 2023-04-24)

We have released a new update to our Ticket Preview feature by adding action buttons that .allow you to perform various actions on tickets without opening them

In addition to the current functionality of moving between the messages in a ticket thread with the buttons at the bottom of the menu. We have added a new row of controls which :give you the ability to update the following

Ticket Assignment •

Ticket Followers •

Ticket Status and Sub-status •

Labels •

Stars •

:As well as take the following Ticket Actions

Delete •

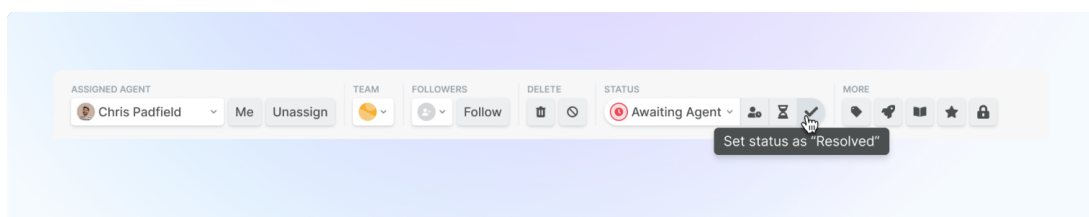

Ban User •

Run a Macro •

Add to a Problem •

Lock the Ticket •

This enhancement will streamline ticket management by allowing you to view and manage tickets. Flicking through the messages for context and then quickly applying an action without having to open the ticket

The Ticket Preview feature is accessible from the ticket list, enabling you to view ticket information and perform actions without leaving the page. This saves time and improves efficiency, allowing you to focus on providing excellent customer service

The update to our Ticket Preview feature significantly improves current functionality by making it easier for agents to manage customer inquiries efficiently

For more information about the actions we've added, you can check out the [Agent Guide](#)
