

## Control whether Pending status is counted in SLAs and Ticket Waiting times

Grace Howlett - Comment (1) - Product - 2020-07-19

We've added some new settings which allow you to control how the time a ticket spends in 'Pending' status is counted

### :Tracking Waiting Times in Pending Status

Now, you can choose whether the time a ticket spends in 'Pending' status counts towards user waiting time, agent waiting time or whether the time a ticket spends in this status is not counted at all. These settings can be configured in **Admin > Tickets > Status >**

#### .Pending

This setting is also available for any Pending [sub-statuses](#) you set up, allowing you to more accurately reflect the waiting times based on *why* a ticket has been put into Pending status .and who you want to attribute the waiting time to

For example, you may have a Pending sub-status which is used to track tickets that are waiting for something internally within your company and you want that to count towards the time a user has been waiting. However, you could have another Pending sub-status that is used when you're waiting on something from a 3rd party supplier and as you have no control over this, you prefer for time spent in this status to not be counted in the waiting .times at all

### :Pending Status & SLAs

For each SLA you create, you can now choose whether you want to stop the SLA from .counting whilst a ticket is in Pending status or any Pending sub-statuses

If a ticket is put into a Pending status where the SLA should not be applying, the SLA warn and fail date in the SLA tab will show N/A until the ticket is moved into a status where the .SLA should be applying again
