

Deskpro Horizon Release 2023.43

Lara Proud - Comment (1) - Release Announcements - 2023-10-24

We're pleased to announce the release of Deskpro Horizon, version 2023.43. This release includes new features our team has been developing, general improvements to product functionality and improving the visibility of the interface, and several bug fixes

New Features

We have added the ability to manually select a ticket's organization. The default behavior that automatically sets a Ticket's Organization based on the User's primary Organization will still occur, but this functionality allows Agents with the relevant permissions to manually override the Organization associated with the Ticket (SC 128588)

The benefits of this addition are that it will enhance the ease of ticket management for Agents as it allows them to quickly update a ticket's associated organization from a ticket, and will also improve clarity for Agents when setting the Organization for Users associated with multiple Organizations

We've added more descriptive titles for the Email Template Variable menu to make navigating the variables clearer (SC 129142)

Latest Improvements

We have darkened the color of grey text used across the interface to enhance contrast and improve legibility (SC 129216)

We have optimized how Agent Department queries are run to enhance speed and performance (SC 130449)

Agents can now Group and Sort Tickets in Queues by Subject (SC 128117)

The Recurring Ticket settings in Admin will now display Date and Time fields in the Agents' own timezone as set in their preferences for improved clarity in the menu (SC 114262)

We have improved how queries are run to enhance the speed for ticket counts and
.(permission checks (SC 130452

.(We made several improvements to Queue performance (SC 129945
□

Bug Fixes

Fixed an issue with the message input option on the Send SMS with Twilio Trigger action
□
.(SC 125790

We resolved an issue with deleting Agents and converting them into a User. Now Agents
□
