

Snippet variables now support more custom fields

(Lara Proud - Comment (1) - Product (Agent) - 2023-02-14)

We've added support for more custom field types to be inserted as variables when using .Snippets

So you can now create a Snippet with variables that will insert different field types. The following list details the different field types and the values that can be inserted

Single-line Text •

Multi-line Text •

Number •

Select •

Single-select ◦

Multi-select ◦

Toggle •

Date •

Date & Time •

Hidden •

URL •

Currency •

File •

To see what values will be inserted into the message when using the variable, see the [.Snippet Variable](#) section of the Agent Guide
