

## Snippet variables now support more custom fields

(Lara Proud - Comment (1) - Product (Agent) - 2023-02-14)

We've added support for more custom field types to be inserted as variables when using .Snippets

So you can now create a Snippet with variables that will insert different field types. The  following list details the different field types and the values that can be inserted

**Single-line Text** •

**Multi-line Text** •

**Number** •

**Select** •

**Single-select** ◦

**Multi-select** ◦

**Toggle** •

**Date** •

**Date & Time** •

**Hidden** •

**URL** •

**Currency** •

**File** •

To see what values will be inserted into the message when using the variable, see the [.Snippet Variable](#) section of the Agent Guide
