Image auto-resizing and lightbox functionality when creating Publish content Collecting Feedback

- Jason Gillan
- **Forum name:** #Feature Request

We would like some features added when creating Publish content in the editor:

1. Auto resizing of images-similar to this Wordpress feature:

<https://en-gb.wordpress.org/plugins/resize-image-after-upload/>

That automatically created resized versions of uploaded images at 75%, 50% and 25% (I believe), this meant when showing a smaller version of the image you didn't get the weird distortion you can have when using HTML/CSS to shrink images.

2. An inbuilt way to have a sort of Lightbox functionality for images, similar to this:

https://www.w3schools.com/howto/howto_js_lightbox.asp

We would also like this feature to be able to zoom into images. We have a lot of images of our software in our guides and not everywhere the image is big enough.
