Secure File Distribution To Users Archived

- Jim Susoy
- **Forum name:** #Feature Request

It would be great to be able to make files available for download by specified users securely. For example, we sometimes ship patched executables to customers for testing. We only want that specific customer to have access to the file.

 Ideally the user would login to the help desk and be able to go to an area which would list all the files they have access too. A bonus would be to allow groups of users access to specified files as well.
