Sort field values in Reports according to a) order set for the field b) highest number Report

- Koen Glotzbach
- **Forum name:** #Feature Request

Currently tables in reports with list values are ordered in some way (based on value ID?). It would be helpful, however, if I can choose how to sort them:

- a) based on the order of values as set in the admin interface for a given field, or
- b) based on the number of items in the row
