# Automate your Helpdesk

Lara Proud - 2023-09-19 - [Commentaire \(1\)](#) - [Getting Started](#)

Deskpro customers often tell us that one of their favorite features is Triggers, which automatically run predefined actions in response to ticket events.

Triggers make setting up complex workflows simple and enable you to automate routine and mundane tasks; making life easier for you, your teams and your users.

There are a few built-in triggers that control basic helpdesk functions. They can run in response to a new ticket being created, a new reply to an existing ticket or when a ticket's properties change.

Trigger actions can include almost anything including changing the properties of a ticket or sending an auto-reply to a user when they submit a ticket.

To create and manage triggers go to **Admin > Business Rules > Triggers**.

The screenshot shows the Deskpro Admin interface. On the left is a navigation sidebar with categories like Overview, Configuration, Channels, Agents, Help Center, Ticket Structure, Features, Business Rules, CRM, and Apps & Integrations. The 'Triggers' option is selected. The main area is titled 'Ticket Triggers' and shows a list of triggers under 'Apply: Per Department (11)'. The right sidebar is open to the 'Add: New Trigger' form, which has four sections: 1) Properties (Title\*), 2) Event (New ticket, By User, By Agent), 3) Criteria (When/Or conditions), and 4) Actions (Then conditions). The form includes checkboxes for various actions like Help Center, Email, API, etc.

You will be able to see the events that will cause the trigger to run and additional criteria that need to be met in order for it to run.

If the criteria are met, the event will cause the trigger to run the defined actions.

For more detail on triggers and helpdesk automation read the [Triggers](#) section of the Admin Guide.

Or read the next section of **Getting Started**, [Personalizing your Help Center and Content](#).
