How do I find low-rated knowledgebase articles?

Ben Henley - 2023-08-01 - [Commentaire \(1\)](#) - [Reports](#)

If enabled, users can vote on how helpful individual articles are.

It's a good idea to monitor these ratings to find and improve articles that are rated unhelpful.

The screenshot shows a knowledgebase article titled "How-to submit a Gas or Electricity meter". The article is updated as of July 24, 2023, by Lara Proud. It features a list of reasons for giving readings, such as accurate bills and ease of use. At the bottom, there are two buttons: a green "Helpful" button and a red "Unhelpful" button. Below these buttons, it states "2 of 3 people found this page helpful".

You can use this custom statistic to find articles that have been rated poorly by users.

```
SELECT articles.title, articles.id, articles.total_rating
FROM articles
ORDER BY articles.total_rating ASC
```

To use this:

1. Go to the **Reports** interface, then to the **Stats** tab (your account may not have access to use reports, so you may need your admins to grant you access or run the report for you).
2. Click **Create Statistic**.

3. Under **Query Builder** and paste in the code.
