Easily filter your Community Topics with Lists

2024-02-06 - Lara Proud - [Commentaire \(1\)](#) - [Product \(Agent\)](#)

Continuing with our updates on the way you manage and filter your information in the helpdesk, we are introducing the Lists feature to Community.

This enhancement will help broaden Community capabilities by enabling agents to create custom no-code lists of your Community Topics. Agents will be able to form lists with the simple 'is/is not' filtering capabilities already available for Tickets and in the CRM.

The screenshot displays a web interface for managing community topics. At the top, there's a search bar with the filter 'community_topic.id = 3'. Below it is a table of topics. The table has columns for ID, Title, Forum, Status, Votes, and an icon. The status column shows various states like 'Active', 'Collecting Feedback', 'Closed', 'Done', 'Under Review', and 'In Development'. To the right of the table is a 'Filter' sidebar with sections for 'Date / Time', 'Properties', and a search section. The search section has 'Is' and 'Is Not' radio buttons, a search input, and checkboxes for 'Active' and 'Closed'. At the bottom of the table, there's a pagination control showing 'Items per page: 100' and '1-12 of 12'.

Agents can create personalized custom lists across the different Community forums, filtering against fields such as Date and Time, Author, Status, and more. Admins can also create lists on a per-team or global basis enabling powerful and efficient management of Community for your teams.
