## Finding a field name for User Auth Data

Ben Henley - 2023-09-13 - Comments (0) - CRM

You can import data from an external usersource into a custom User Auth Data user field within Deskpro.

To set this up, you need to enter the **Field Name** of the usersource in the User Auth Data field settings.

To do this, go to the settings for the usersource's authentication app in Admin > CRM > Auth & SSO or Admin > Agents > Auth & SSO.

## Use Test Settings.

Click **Show user data** (for Active Directory, SAML, and database auth) or **Show log** (for SAML, Okta, OneLogin, etc.).

You will see a list of attributes showing the field name to use. If the name is surrounded by square brackets, do not enter them into Deskpro e.g. instead of [telephonenumber], use telephonenumber.

## Success

Your settings appear to be valid.	Show log	
Raw user data:		
( [0] => Doe )		
<pre>[telephonenumber] =&gt; Arr ( [0] =&gt; xxxxxxxxx )</pre>		0
[useraccountcontrol] =>	Array	1

Success	
Your settings appear to be valid.	🖹 Show user data
