Deskpro 2022.1.0 Release

2022-03-09 - James Godwin - Comments (0) - Release Announcements

We are pleased to announce the release of **Deskpro version 2022.1.0**. This is a bugfix release.

Bug Fixes

- SC 63890 Move Google fonts loading to product and allow to disable it
- SC 64608 Add an existing user as a CC, then add a new user as a CC, receive an incorrect error message pop up
- SC 64116 Missing attachment source_ref's
- SC 61472 Help Center Theme switch from legacy portal to new help center theme not changing
- SC 56399 HELP CENTER Calendar pop up selection does not update field on user form
- SC-62064: 500 error in some cases when using the API to create new tickets.
- SC-62069: Temporary blobs being served after being abandoned. This could be abused to upload files that agents couldn't delete easily, but with permalinks that would still work. See <u>this KB article</u> for a fuller explanation and mitigations to handle pre-existing temp blobs.
