Add data fields back into custom user fields Finished

- Clint Broadhead
- **Fórum neve:** #Feature Request

I would like to see the import of Active Directory data into user/crm custom fields implemented again. It was nice to be able to click on the users name and see all their pertinent information without having to look them up in active directory. This feature died when the new admin was released.<br /><br /> <br /><br /> See: https://support.deskpro.com/kb/articles/173-copying-data-from-a-user-source-into-a-custom-user-field
