Content v2 API POST for Articles/Downloads Collecting Feedback

- Jack
- **Forum name:** #Feature Request

I'm liking the V2 API you are working on. I adjusted most of my code to work with it, but I have one project that creates Articles and Downloads. It would be super helpful if you guys could release that in the near future. What's your timeline for the API look like?

With every update we release a number of improvements to the V2 API - we are aware more and more companies are utilising this new API so are aware of the scope of improvements we want to make, glad you are enjoying the new features already.
