Getting notification if somebody add a comment to one of the tasks I'm concerned in
Collecting Feedback

- Zsolt Kiss
- **Forum name:** #Feature Request

If i delegate a task or if there is a task which belongs to my team and somebody comments on it, we don't get any notifications. It would be perfect if i could get a notification if a comment is made on a task i'm concerned in.

The task section could be the one of the most useful part of DeskPro, it would be amazing if handling tasks was so sophisticated than the other parts of the system. Now its functionality needs some improvements. I have opened more feedbacks regarding this part, this is an additional suggestion / requests. It would be important for us especially.
