Have Working Hours only as well as Total Hours accessible via Reporting Finished

- Jason Gillan
- **Forum name:** #Feature Request

I am trying to create a report to measure the number of working hours a user has been waiting. However all the measures available in the reporting manual seem to list total hours rather than just working hours. On an actual ticket in the Dates & Times tab it shows both the Total User Waiting Time as work hours only as well as real time. The report I have at the moment is: `DISPLAY TABLE SELECT tickets.subject, tickets.id, tickets.total_user_waiting / (60 * 60) AS 'User Waiting Time (hrs)' FROM tickets WHERE tickets.date_resolved = %1:DATE_GROUP% AND tickets.status IN ('resolved', 'archived') SPLIT BY tickets.agent` It would be a good improvement to be able to do take out just working hours that a user has been waiting.

We can prepare report with the total time user is waiting or time for the first reply. I need to include in my report this time, but only in working hours. Thanks!

Still waiting for this functionality.

Paul

We would also like this functionality

Andreas Patzner

4 tahun yang lalu

We also require this functionality, as customers request an average response time within business hours.

Yann Desjardins

4 tahun yang lalu

Also waiting for this function. We get a lot of emails outside of office hours from our associates in different time zones and it's skewing the data for first reply

I would like this feature as well - we have SLAs that only tick during business hours, but the 'average time to reply' reports I can create don't produce accurate reports for management to set KPIs by.

We need this as well

Hope this helps with the Canadian calculation <http://www.workingdays.ca/#awd>

This feature has now been created, please refer to this article on how to use working hours in reports:
