

Introducing: New Knowledgebase Content Editor

2018-03-19 - Benedict Sycamore - Comments (2) - Product

The knowledgebase content editor used in the Publish section within Deskpro has been updated.

We have introduced Froala, a lightweight WYSIWYG HTML Editor written in Javascript that enables even more rich text editing opportunities within Deskpro.

How does the new editor work?

Froala works a lot like our old text editor, is incredibly easy to use, and comes with a whole range of useful features that you can check out [here](#).
