

Snippet variables now support more custom fields

2023-02-14 - Lara Proud - Comments (0) - Product (Agent)

We've added support for more custom field types to be inserted as variables when using Snippets.

So you can now create a Snippet with variables that will insert different field types. The following list details the different field types and the values that can be inserted:

- **Single-line Text**
- **Multi-line Text**
- **Number**
- **Select**
 - **Single-select**
 - **Multi-select**
- **Toggle**
- **Date**
- **Date & Time**
- **Hidden**
- **URL**
- **Currency**
- **File**

To see what values will be inserted into the message when using the variable, see the [Snippet Variable](#) section of the Agent Guide.
