Default Article Editor Collecting Feedback

It would be nice to use the same editor across the whole "Publish" tab.

I'm am writing some guides and a lot of it involves tables, which work great on the knowledge base editor but not on the guides editor.

I've mentioned this on other similar feature requests: our company needs the same RTF toolbar on both articles and guide topics. We'd like both toolbars combined so that both articles and topics have the same icons - we need to be able to edit HTML, include Markdown, insert notes, etc., in both articles and topics.
