

## How can I set different styling for emails across different brands?

Grace Howlett - 2019-02-14 - [Comments \(0\)](#) - [Using Deskpro](#)

If you have created multiple brands in your helpdesk, it's possible to define different CSS/styles in the email templates for each brand.

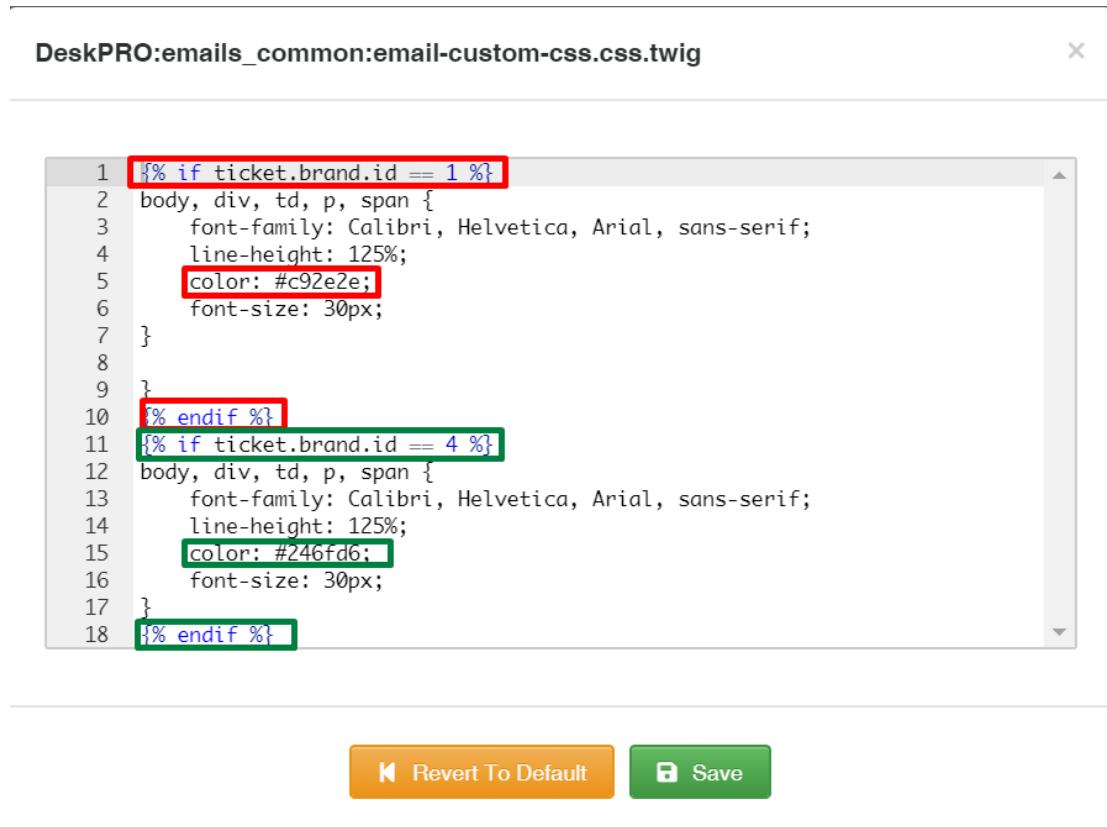

You can edit the email template CSS by going to **Admin > Emails > Email Templates > Layout (Header, Footer, CSS)**.

The 'Main CSS' file is where you can see the CSS being used in the email templates. If you want to customize the CSS per brand, you can click on 'Custom CSS' and add the edits there.

Below is an example. Here I added a change to the body text color for each of my brands.

I added `{% if ticket.brand.id == 1 %}` (where 1 is the brand ID), then I added the CSS the the hex code changed for 'Color', then I finished with `{% endif %}`.

I repeated that but changed the brand ID and the hex code again.

The screenshot shows a code editor window titled "DeskPRO:emails\_common:email-custom-css.css.twig". The code contains two conditional blocks for different brands:

```
1  {% if ticket.brand.id == 1 %}           (Red box around the condition)
2  body, div, td, p, span {
3      font-family: Calibri, Helvetica, Arial, sans-serif;
4      line-height: 125%;
5      color: #c92e2e;                      (Red box around the color)
6      font-size: 30px;
7  }
8
9
10  {% endif %}                         (Red box around the end of the first block)
11  {% if ticket.brand.id == 4 %}           (Green box around the condition)
12  body, div, td, p, span {
13      font-family: Calibri, Helvetica, Arial, sans-serif;
14      line-height: 125%;
15      color: #246fd6;                      (Green box around the color)
16      font-size: 30px;
17
18  {% endif %}                         (Blue box around the end of the second block)
```

At the bottom of the editor, there are two buttons: "Revert To Default" (orange) and "Save" (green).

To find out the ID's for each of your brands, you can add `/api/v2/doc#get--api-v2-brands` to the end of your helpdesk URL. Click on the sandbox tab and hit 'Try! It should return information about your brands, including the ID numbers.

Once you save the change, the custom CSS will override the main CSS.
