Deskpro Horizon Release 2022.20.0

2022-05-17 - James Godwin - [Comments \(0\)](#) - [Deskpro Releases](#)

New Channels added to On-Premise

Deskpro is proud to announce that Voice, SMS, WhatsApp & Twitter channels are now available On-Premise.

We have been working hard over the past few months to bring the full multi-channel experience of Deskpro On-Premise, in line with Deskpro Cloud, with more social channels planned for release across 2022.

Bringing calls and social media channels into your helpdesk gives your team the ability to provide true multi-channel support from one place.

Voice, SMS & WhatsApp Channels (managed by Deskpro) (SC 71940 & SC 71886)

Voice, SMS & WhatsApp are now available to use as communication channels on Deskpro On-Premise to send and receive calls, SMS and WhatsApp messages from within the helpdesk.

All three of the channels are built on Twilio (the same framework as for Deskpro Cloud) and the messages are fully integrated into Deskpro ticket interface.

- Voice - Call center software in your helpdesk
- SMS - Send and receive SMS messages
- WhatsApp - Two-way WhatsApp business messaging

The channels are included with your license and available to anyone On-Premise from this release onwards. The channels can be turned on within the Admin interface, **Admin > Channels > Select Channel (Voice/SMS/WhatsApp)**. To be able to make calls or send messages, you will need to add service credit to your account, which can be done by an Admin in the billing section.

For in-depth walkthroughs regarding set-up and how to use the new channels, please see the guides on [Voice](#), [SMS](#) and [WhatsApp](#).

Twitter Channel (direct with Twitter) (SC 68195)

Twitter is now available as a communication channel for On-Premise customers, enabling support teams turn @mentions into tickets on your helpdesk for two-way communication with customers on Twitter.

Linking your Twitter account into your helpdesk, is done directly via Twitter, with no third party involvement.

To set up Twitter on your helpdesk, you'll need a Twitter developer account and then you will need to follow these [steps](#) to enable Twitter as a new channel on your helpdesk.

Once you have connected your helpdesk to Twitter you are able to:

- Choose how & when @mentions & DM's become tickets
- Reply to @mentions & DM directly from the ticket interface
- Use triggers to automate responses to @mentions

What else is new in this release
