Average time until first response

Matthew Wray - 2023-09-08 - 댓글 (0) - Reports

An overall average time till the first response report can be generated using the DPQL below:

SELECT AVG(tickets.total_to_first_reply / 3600) AS 'Average first response time in hours'
FROM tickets

For a specific timeframe, a variable can be added, which allows the flexibility of choosing a specific timeframe. This can be done by first clicking on 'Add Variable' and filling in the details as follows:

ID AS \${date}	Û
date	
TYPE	
Date	~
DEFAULT VALUE	
last year	¥
Add Variable	

Once the variable is added, you could add a WHERE clause, which is used to limit the data displayed or used. In this example, a DPQL form can be written as shown below:

```
SELECT AVG(tickets.total_to_first_reply / 3600) AS 'Average first response time in
hours'
FROM tickets
WHERE tickets.date_created = ${date}
```

This data can be further grouped by agent, as shown below:

SELECT AVG(tickets.total_to_first_reply / 3600) AS 'Average first response time in
hours'
FROM tickets
WHERE tickets.date_created = \${date}
GROUP BY tickets.agent
