## I don't want to show the author for Knowledgebase Articles

Julien Ducro - 2023-08-31 - [댓글 \(0\)](#) - [Help Center](#)

If you want to remove the author attribution for Knowledgebase Articles on the Help Center, you can do this by editing two templates. Go to **Admin > Help Center > Help Center Design > Open template editor** then open the template **Article > view.html**

Delete the post-avatars block on the following screenshot:

```
152         src="{{ asset('img/page-icons/knowledgebase.svg', 'help_center') }}
153     <h1 class="dp-po-title-text" lang="{{ article.translated_language.loc
154 </div>
155
156     <div class="row align-items-end">
157         <div class="col-sm-10">
158             Theme:PublishCommon:post-avatars.html.twig
159
160         <div class="dp-po-post-info">
161             <ul class="dp-po-post-info-list">
162                 <li class="dp-po-post-info-item">
163                     helpcenter.general.last update by
164                 </li>
165             </ul>
166         </div>
```

You also have to edit the phrase `helpcenter.general.last_update_by` to remove the reference to the last author.

And finally, in the meta block further, in the template, remove lines 2 and 3 referring to the author. Please note all Help Center content pages will be affected.

```
263
264     {% if has_permission('articles.share') %}
265         Theme:PublishCommon:share.html.twig
266     {% endif %}
267
268     Theme:PublishCommon:meta.html.twig
269 {% endblock %}
270
271 {% block doc_end %}
272     {{ insert_glossary_js(article) }}
273     <script type="text/javascript">
274         let url = location.href;
275         document.body.addEventListener('click', () =>

</div>
<div class="col-sm-3">

```

This will remove the author's name when viewing an individual article or browsing a category.

If you make a mistake editing one of the templates and there's a problem displaying those pages, just select the edited template and use **Delete Customization**.
