Ability to set a default e-mail name, of each account Under Review

- Kenneth
- **Forumo pavadinimas:** #Feature Request

Currently, when requesting a new password, there is no name sent with the e-mail header, so the e-mail name appears in modern clients as "test@domain.dk", which is not pretty. A feature like setting a default e-mail name, for each account (overwritten by triggers etc.), would make it more flexible. Suggestion: Add the default name setting, to the e-mail account setup/properties page.
