Deskpro

Improve picture insert feature in Horizon Report

- Zsolt Kiss
- **Forumo pavadinimas:** #Bug Report

In the Horizon version there is a new feature to insert a picture into a ticket message. The move is good because it provides more formatting option comparing to the old Deskpro but the implementation is not so quality of it should be.

There is a huge Deskpro logo in the popup window for no reason. The menu is not so intuitive moreover the "keep aspect ratio" checkbox is completely invisible and it hasn't got any caption nor.

After resizing the picture the inserted one is not properly rendered, the inserted pictures' contours are pixelised.

Please implement this feature in better way.
