

How can agents communicate with each other within Deskpro?

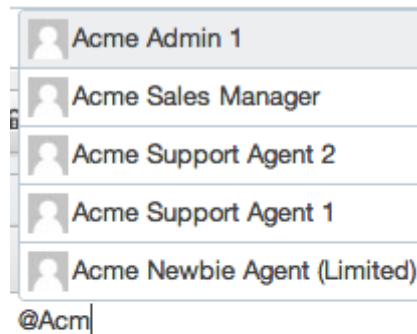

Ben Henley - 2023-08-31 - Comments (0) - Deskpro Legacy

1. When viewing the details of a ticket, an agent can write a **note** instead of a **reply**. This is visible to any agent who looks at the ticket later, but is not sent to the user.

Agents receive an email or browser notification when a note is left on a ticket that is assigned to them or that they follow (depending on their notification settings).

2. An agent can **@mention** another agent within a note, to guarantee they will be notified regardless of their settings. This involves simply typing @ and then the start of the agent's name, then selecting the agent to mention from an auto-complete menu.

3. There is an [agent IM system](#) enabling real-time chat between agents. This is separate from the user chat system.
